

D'LUMIERE ESTHETIQUE SKIN CARE LAUNCH

The official launch of the D'Lumiere Esthetique skincare line created by renowned Australian Dermatologist and Cosmetic Surgeon Dr Daniel Lanzer took place at the end of last year. Media attending met the founder and had one-on-one time to experience the range guided by the Doctor himself.

The D'Lumiere Esthetique offering is the first anti-ageing cosmeceutical product range that combines a new approach of DNA repair enzymes and super concentrated active ingredients to hit the Australian market.

D'Lumiere Esthetique's products are Australian made, highly potent and include active ingredients, containing liposomes for increased absorption and plant derived (Candle Tree) DNA extract to protect and heal the skin.

Dr Daniel Lanzer's key purpose at the event was to educate key media and influencer guests on the benefits and results that can be achieved with the concentrated, high potency skincare regime. Specialist clinic staff were also on hand for product testing and to offer guests express treatments.
